18 April 2018

Dear HL7 Member,

The FHIR Infrastructure Work Group has asked me to notify you of a set of recommended corrections and modifications to the currently published [HL7 FHIR R4 standard](#).

This technical issue and its resolution is fully described in [GForge Tracker item #20734](#) and corrects broken links to external IG registries on the FHIR home page, so that they now read:

- Implementation Guide Registry [to <http://www.fhir.org/guides/registry>]
- FHIR Registry [to <http://registry.fhir.org>]

Since the references apply for all use of the FHIR specification irrespective of version, and do not impact directly on implementations, these changes will be applied to the FHIR R4, STU3, and DSTU2 Specifications

Sincerely,

A handwritten signature in black ink, appearing to read 'W. R. K.' with a stylized flourish at the end.

Wayne R. Kubick
HL7 CTO
